Summary

As a dedicated Salesforce Developer with 5+ years of experience, I take pride in maintaining high levels of client satisfaction and demonstrating strong skills as an independent worker, multitasker, and team player. My expertise encompasses Salesforce platform configuration, customisation, testing, and deployment. I have a proven track record in Community Cloud, primarily focusing on Apex, LWC, and Flows. I am committed to delivering thoughtful and effective solutions that meet business needs with efficiency and quality.

Salesforce Certifications Held

Salesforce Certified **Platform Developer I**, **Platform Developer II**, Salesforce Certified **Administrator**.

Skills

LWC, FSL, Apex, Lightning Flows, Triggers, Admin Configuration, SOQL, Test classes, Validation rules, Formulas, etc.

Experience

Senior Consultant I

Nov 2025 - Present

Ernst & Young Global Delivery Services

As a Senior Salesforce Consultant, I lead technical discovery and solution delivery by translating complex business requirements into high-performing, scalable architectures. My focus centers on architecting self-service, partner, and customer portals within **Experience Cloud (Community Cloud)**, leveraging modern **Lightning Web Components (LWC)**, advanced **Flows**, and robust **Apex** backend services to create seamless user journeys while maintaining strict platform governance and security standards.

Project (s)

Client #1: US Based organisation

Description: I am currently working with a leading US-based HVAC and manufacturing enterprise, leading the Experience Cloud stream in collaboration with the Commerce Cloud team to deliver unified digital portal solutions. My role involves partnering directly with business stakeholders to translate complex requirements into scalable architectures, with a focus on designing modern UI layouts, developing customized support tiles, and building self-service components using Lightning Web Components (LWC), Flows, and Apex to streamline support operations and enhance user experience.

Software Engineer

Feb 2021 - Nov 2025

Absyz Software Consulting Pvt. Ltd.

As a Software Engineer, I successfully took ownership of a critical project track and contributed to two additional POC modules. I led the development of a custom form built with LWC, where client representatives enter customer data. This form featured a reusable child LWC component for a custom lookup function. Additionally, I worked on two key tracks related to Lightning migration and implementing name changes. Throughout these projects, I leveraged my expertise in Community Cloud, setting up portals, LWC, Apex, SOQL, and handling configurations and customisations.

Project (s)

Client #1: UAE-Based Organisation

Description: I worked with a prominent financial regulatory authority in the UAE, focusing on a key compliance and governance-related initiative. My responsibilities involve developing and enhancing custom solutions to streamline regulatory processes, ensuring adherence to industry standards. This includes building custom forms, automating workflows, and integrating various systems to support compliance tracking and reporting.

Client #2: US-based parking solutions company

Description: I worked with a US-based parking solutions company specialising in leasing vehicles. The project involved customising Salesforce Sales Cloud to meet the client's unique business needs, including developing a custom LWC to enhance their leasing management system. I also played a key role in data migration, ensuring the seamless historical data transfer into Salesforce while maintaining data integrity. This solution optimised their operational workflows, providing a streamlined process for vehicle leasing and customer management

Client #3: India-based tile manufacturing and service company

Description: I worked with a leading India-based tile manufacturing company that utilised Salesforce Field Service (FSL) to manage their field operations. My role involved building custom solutions within FSL to streamline and optimise their service management processes. This included creating tailored workflows, automating job scheduling, and developing custom functionalities to improve field technician efficiency and enhance customer service. The solution was designed to support their field teams in managing installations, repairs, and maintenance tasks more effectively while ensuring seamless coordination between field agents and the central system.

Responsibilities :

- Developing components with **LWC** based on the requirements.
- Developing Mobile flows for FSL, Configuring and customising the system using various aspects of FSL(Work order, Work Order line Item, Service Appointment, scheduling, etc.).
- Creating **Apex** controllers and associated test classes.
- Building **Approval Processes**, **Workflow** Rules, etc.
- Built **Flows** as per requirement.
- Setting **Validation rules** as per requirement.
- Change set creation.
- Keeping a data dictionary to ensure nothing gets missed from the deployment list.
- Deployments.
- Regular meetings with team members to discuss the updates/hurdles, if any.

Additional Roles in Organisation:

- Coordinated and directed the Train-To-Hire (TTH) program for 80+ candidates.
- Designed the training curriculum and syllabus for the TTH program.
- Held regular meetings with Trainers and Mentors about the TTH program.
- Conducted 5 MCQ Exams and 2 Hackathons for 80+ candidates.
- Allocated the fresh recruits to different projects based on the project vacancies and candidates' training performance.
- Gave an ice-breaking induction speech to the juniors who joined the firm via the TTH program.

Highest Education

M.Tech specialised in **Computer and Information Science**, Department of Computer Science, Cochin University of Science & Technology, Kalamassery, Kerala, India.

Awards & Honours

- **Award Winner** - 2 times Applause Award, Absyz.
- **Runner-up** - Smart India Hackathon 2019, Hubli, India.

Interests

Video Games, Music, Films.
